EDUCATION

University of Maryland Aug 2025 - May 2028
Bachelor, Computer Science, Finance *College Park, MD*
- Coursework: Data Structure and Algorithms

EXPERIENCE

Structora - Palantir Startup Fellowship/NVIDIA Inception Jan 2026 - Present
Machine Learning Engineer *College Park, MD*
- Reduced median brief to validated BuildingSpec time from 102 seconds to 38 seconds in local benchmarks by replacing freeform JSON and manual Pydantic retries with Instructor structured extraction
- Increased schema-valid extraction on BuildingSpec v2 from 0% to 100% on the same prompt, where the raw JSON path failed after three repair attempts every run
- Engineered a deterministic LangGraph fallback that parses briefs in 40 milliseconds for offline and development use
- Integrated a BIM to IFC graph generator with Neo4j and Node.js so architects can query building models as graphs

Maryland Neuroimaging Center Jul 2026 - Present
Undergraduate Research Assistant *College Park, MD*
- Develop the React frontend for the English Sublexical Toolkit (Wiley et al., 2024) under Dr. Jeremy Purcell, spanning 8 routed views over a 400 measure catalog of grapheme-phoneme consistency
- Delivered 2 analysis workflows and 3 result table formats across 34 variables in 8 categories, with responsive layouts and CSV export
- Structured a dataset of 22,500 words and 21,000 precalculated records into normalized tables with pandas and validated the values against the published dataset

Voodoo - Vex Aug 2025 - Present
Software Engineer *College Park, MD*
- Designed the clipping interface and supporting backend so users can scrub a video and select a segment
- Programmed candidate retrieval and ranking models for the recommended feed
- Streamlined transcription by routing OpenAI speech to text through Python scripts feeding ElevenLabs voice agents
- Optimized ranking logic against live engagement data and deployed the changes

Project LIFT Aug 2026 - Present
Tech Lead *College Park, MD*
- Lead 4 engineers building a custom inventory system for a florist to replace their Google Docs stock sheets
- Direct development of a costing tool that breaks arrangements into stems and applies wholesale markup
- Prototype low stock alerts that flag when a flower drops below its weekly minimum and suggest a similar substitute for rush orders
- Conducted requirements interviews across their point-of-sale, wire service, and delivery workflows to scope the build

PROJECTS

Strive Dec 2025
- Built a workout tracker that logs sets, reps, weight, total volume, and session time
- Organized the backend around lifting data to support rankings and leaderboards
- Implemented MongoDB storage and the interface for comparing sessions

AI Dungeon Master Aug 2025 - Present
- Introduced 2D map generation with Stability under per-user limits
- Extended the map system with a 3D interactive mini map for events
- Constructed a Neo4j knowledge graph for long term session memory
- Automated validation of movement and skills with a scraper for the Dungeons and Dragons 5e API

Flyers Prediction Model Aug 2025 - Present
- Modeled NHL game outcomes across 2,624 regular season games, 2 seasons, and all 32 teams using as-of-game records, rest, and recent form with no future standings leakage
- Surpassed a 51.2% home-ice baseline with logistic regression at 57.8% accuracy and 0.60 ROC-AUC on a 367 game chronological holdout from March to April 2026
- Accelerated dataset rebuilds from thousands of per-game API calls to 72 cached weekly schedule requests, 80 seconds down to 2 seconds on rerun

TECHNICAL SKILLS

- **Languages:** Java, Python, C/C++, SQL (Postgres), JavaScript, HTML/CSS, R, TypeScript
- **Frameworks:** React, Node.js, Flask, JUnit, Material-UI, FastAPI
- **Developer Tools:** Git, VS Code, Visual Studio, PyCharm, Cursor, Eclipse
- **Libraries:** pandas, NumPy, Matplotlib
