EDUCATION

University of Maryland **Aug 2025 - May 2028**
Bachelor, Computer Science, Finance *College Park, MD*
• **Coursework:** Data Structure and Algorithms

EXPERIENCE

Structora - Palantir Startup Fellowship/NVIDIA Inception **Jan 2026 - Present**
Machine Learning Engineer *College Park, MD*
• Developed a natural-language-to-JSON pipeline using the Instructor library and Python/NumPy, enabling automated conversion of user queries into structured data for downstream models
• Integrated a BIM-to-IFC graph generator with Neo4j using Node.js, allowing architects to query building models as graph data and streamline data exchange
• Fixed semantic normalization and reduced LLM hallucination in the NLP-to-Revit pipeline by refining prompt templates and adding validation checks, which improved model reliability for generating accurate building components

Maryland Neuroimaging Center **Jul 2026 - Present**
Undergraduate Research Assistant *College Park, MD*
• Develop a web interface using React and Docker for the English Sublexical Toolkit (Wiley et al., 2024), enabling researchers to compute grapheme-phoneme consistency across phonographeme, onset, and rime levels for real words and pseudowords, which streamlines reading and spelling cognition studies under Dr. Jeremy Purcell

Voodoo - Vex **Aug 2025 - Present**
Software Engineer *College Park, MD*
• Worked on clipping UI and backend to allow user scrubbing and video selection
• Created ML models, such as candidate retrieval and ranking models, to generate a user-recommended feed
• Integrated OpenAI speech-to-text API with Python scripts to generate accurate ElevenLabs voice agents, reducing transcription time and improving voice quality for user interactions
• Worked with real engagement data to refine ranking logic, optimize performance, and ship improvements

Project LIFT **Aug 2026 - Present**
Consultant *College Park, MD*
• Joined a student consultancy and built web applications with React and JavaScript and AI-driven tools using pandas and Docker, helping local small businesses improve their online presence and automate routine tasks

PROJECTS

Strive **Dec 2025**
• Developed a comprehensive workout-tracking app that records sets, reps, weight, total volume, and training time with reliable data flow
• Built backend features to organize lifting data and support competitive elements like rankings and leaderboards
• Implemented UI elements and data storage using MongoDB to make tracking and comparing progress straightforward

AI Dungeon Master **Aug 2025 - Present**
• Created a 2d map generation feature using Stability with user restrictions
• Added 3d interactable mini map generation for events
• Implemented a knowledge graph using Neo4j for long term session memory
• Created a scraper for DND 5e API to validate movement and skills

Flyers Prediction Model **Aug 2025 - Present**
• Built machine learning model to predict Philadelphia Flyers game outcomes using historical data from the NHL API
• Implemented data preprocessing pipelines and feature engineering to improve prediction accuracy
• Collected and processed team statistics, player performance metrics, and game conditions to train predictive models

TECHNICAL SKILLS

• **Languages**: Java, Python, C/C++, SQL (Postgres), JavaScript, HTML/CSS, R, TypeScript, React
• **Frameworks**: React, Node.js, Flask, JUnit, Material-UI, FastAPI
• **Developer Tools**: Git, Docker, Google Cloud Platform, VS Code, Visual Studio, PyCharm, Cursor, Eclipse
• **Libraries**: pandas, NumPy, Matplotlib
